

2024

Devops Workshop

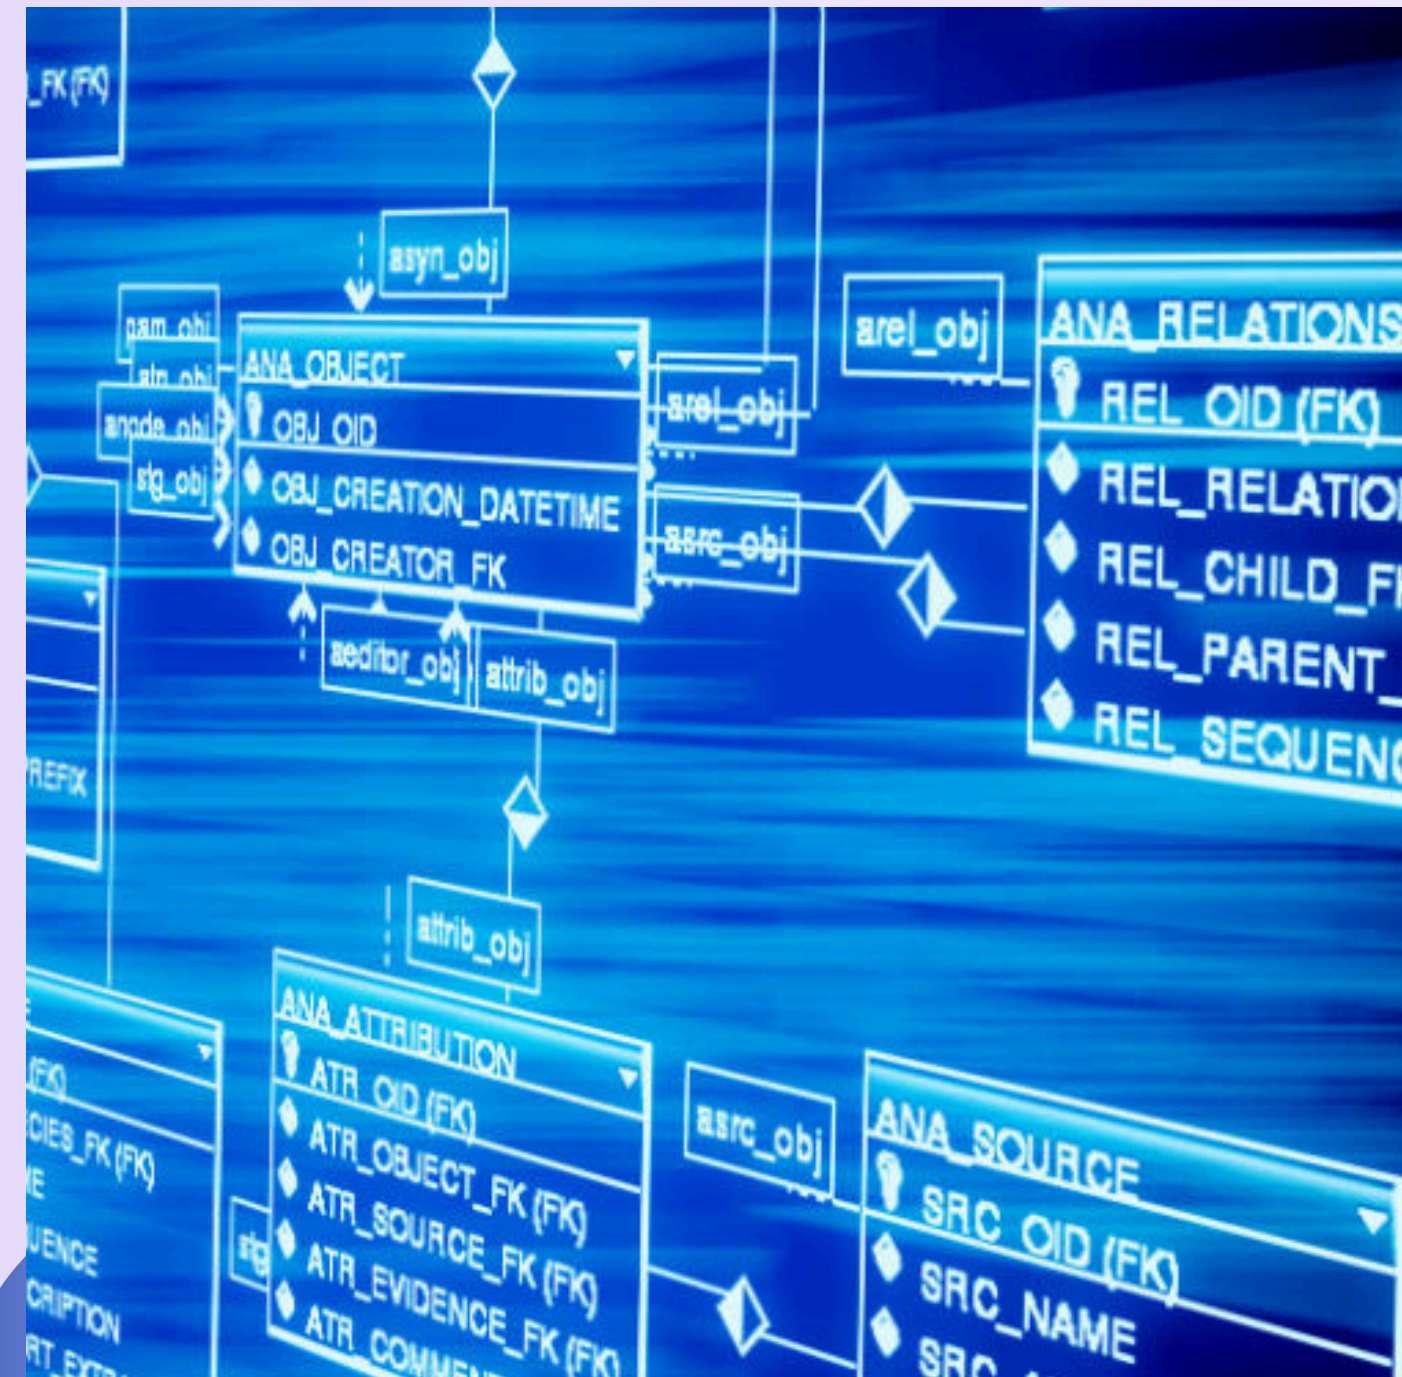

by-sakshi poddar

steps for git

2024

- first you have to install and create account on github
- then, create a repo in github with the name of devops-01
- copy url from github
- create new folder with the name development and open folder with git bash

Gitbash command

- `$git clone "url"`
- `$git ls`
- `$git cd "repo name"`
- `$git status`
- modify your code then add
- `$git add .`
- `$git commit -m "messages"`
- `git push`

steps for creating Ec2

2024

- first create account on aws
- search Ec2 on searchbar
- launch instance

steps for creating instance on Ec2

2024

- first you have to give a name of instance
- select operating system
- select AMI volume type(free tier)
- select instance type(free-tier)
- create key-pair
- give a pair-name
- select type
- click on download(file will be downloaded as extn .pem)
- network choosing option allow https and http
- select storage capacity and create

steps for creating CI/CD pipelines 2024

prerequisite

- developement code along with yml file
- aws instance EC2

steps

- push your local code into github
- then configure secrets key

(EC2_HOST,EC2_USER,EC2_SSH_KEY)

Here,EC2_HOST IS IPV4 address of our instance

EC2_USER is username of instance

EC2_SSH_KEY is the content of .pem file

Thank
You.
